

Did you know that **energy** is the main cost component in feed?

INTRA LIPOSOL: DIETARY ENERGY PROMOTER

Energy is the main cost component in poultry and pig feed. Because of its energy content, fats and oils are important energy sources. The digestibility of fat is related to the source and type of fat, composition of the diet and the age of the animal.

Intra Liposol can be used to improve fat digestion and thereby improve energy efficiency.

5 REASONS TO CHOOSE INTRA LIPOSOL

- ✓ Energy promoter when digestion is insufficient
- ✓ Saves feed costs via improved efficiency
- ✓ Promotes fat metabolism, especially in young animals
- ✓ Supports the immature digestive system of young animals
- ✓ Converts more fat into dietary metabolic energy

BILE ACID FORMATION is limited in young animals, affecting their ability to digest fat

Intra Liposol **DISPERSES FAT** in the watery intestinal environment within seconds

Fat provides about twice the amount of **ENERGY** than protein or carbohydrates

INTRA LIPOSOL SUPPORTS FAT DIGESTIBILITY AND EFFICIENCY

Intra Liposol is a drinking water based supplement within our **Intra Nutrients** programme. Benefits of this programme includes precision nutrition and continuous supplement intake via drinking water and ease of use via flexibility of dosing.

Intra Liposol
