

## SUPPLEMENTS FOR ALL SITUATIONS

Supplementary feed can promote healthy growth, prevent disease and support veterinary treatment. The targeted combination of selected additives such as immunoglobulins, vitamins, trace elements, prebiotics and probiotics compensates for deficits, supports immunity and additionally uses synergistic effects for an improved efficacy.

As a full-range provider of powders, liquids and pastes, we can draw on many years of experience in a wide variety of markets worldwide. In addition to our own brand, it is possible to develop customized products and to implement them in private labels.

With you all the way!

Feed Safety for Food Safety®

## FEED SAFETY FOR FOOD SAFETY®

This has served as our guiding principle since 1986. For more than 30 years, we have been supplying innovative products for efficient and safe animal nutrition. The criteria for developing and expanding our product portfolio is based on the changing needs of livestock, humans and the environment. All types of livestock animals benefit from our know-how, and we also offer innovative products and concepts for pets and horses.

## FOCAL POINT

Our products place us in direct contact with the feed industry, farmers and livestock. At the same time, we are networked with the food industry and committed to supporting consumers and their specific needs. Continuous research focusing on innovative products and concepts conducted by independent, internationally recognized institutes is one of our highest priorities.

## PRODUCTION AND DISTRIBUTION

Our portfolio includes additives, premixes and special feed produced in-house, along with products supplied by the world's leading additive manufacturers. This level of flexibility, together with a wealth of experience in product efficacy, enables us to offer innovative, highly effective concepts for all animal species, from fish to ruminants.

## ONGOING OPTIMIZATION

Trained staff in research and development, registration, marketing, logistics and distribution are there to ensure optimal customer service — from creating the initial concept, to delivering the finished product.

## FLEXIBILITY

Package sizes for powder products range from a 50 g sachet to the 1000 kg Big-Bag. Liquid products and gels are available in everything from 100 ml bottles to 1000 liter containers. In addition, the production and filling of pastes in syringes and cartridges from 15 to 80 ml is possible.

With warehouse capacity for 8,500 palletes, flexibility in production and delivery ist guaranteed, even for small batches.

## SAFETY GUARANTEED

At Biochem, product safety and quality go far beyond conducting the legally required tests. Regular analyses of product samples are provided by independent laboratories. Combined with the ongoing research by internationally recognized institutions on the efficacy of products and concepts, we ensure that only carefully tested and effective products leave our production facilities.
